photobooth4u

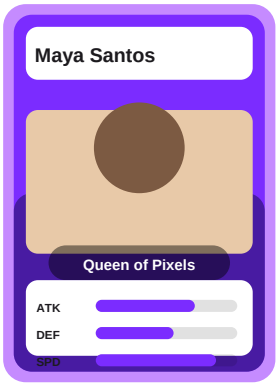
Trading card & certificate booth

Setup and event guide

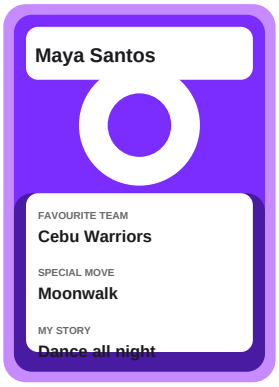
Turn every guest into a collectible card or an award winner. Your own designs, groups, a back of the card, guest questions, and two-sided printing.

What this booth does

The Trading card booth and the Certificate booth change what a guest walks away with. The guest types a name, takes one photo, and the booth makes a finished card or certificate that can be printed and shared by QR. Everything else about the booth (camera, printing, QR, vouchers, retakes) works the same as before.



Card front



Card back (optional)

Certificate

	Trading card	Certificate
Guest types	Name, a title ("Dancing Queen") and up to 3 questions	Name, and an award ("Best Dancer") if you ask for it
Photo	One photo in the picture window	One round photo with a seal
Built-in looks	23 styles in 8 categories, random stats and rarity	9 styles
Your own designs	Yes: upload templates (front and back), grouped	Yes: upload templates, grouped
Prints on	4R sheet, or card-size paper	A4 or Letter (turns sideways to fit), or 4R

GOOD TO KNOW

The Booth type switch only appears when your plan has **Card & certificate booths** turned on. If you do not see it, ask us to turn it on for your code (see the next page). Trials can have it too.

How a guest uses it

1. The guest taps the welcome screen to start.
2. If you let guests choose, they pick a design, filtered by group (for example Sports or Superheroes).
3. They type their name and a title. Any questions you set up appear here. A live preview of the card is shown beside the form, and the guest can tap it to flip it.
4. The countdown runs and the photo is taken. For cards the camera view is shaped like the card's picture window.
5. The finished card or certificate appears with a QR code and, if you allowed it, a Print button. Cards with a back show **Flip card**. A card with random stats shows a message such as "You pulled a Legendary card!".

1. Turn it on (admin)

This is a switch you control for each plan, so you decide who gets it.

Where	What to do
Free trial	Admin page, Trial settings: tick **Trials get Trading card & Certificate booths**, then Save trial settings.
New code	When creating codes, tick **Give trading card & certificate booths**. It is off by default.
Existing code	In the code's row, press **Give card & certificate booths**. Press the same button again (it now says Hide) to take it away.

GOOD TO KNOW

An open booth picks the change up within about 5 minutes. If the option is taken away while a booth is set to Card or Certificate, it goes back to the normal photo booth after the current guest.

GOOD TO KNOW

The laptop app and the Android app get the option from the licence, so after you give it, the renter should press **Check for changes** in the app, or restart it. A new app release is needed once, so the apps understand the option.

2. Switch the booth type (renter)

At the top of Setup you will see **Booth type**.

1. Open Setup and tap **Trading card** or **Certificate**. The preview changes at once.
2. Step 1 (Design) becomes the style page: pick a built-in style, and add your own templates there.
3. Step 2 (Text) has the wording: for a card, up to 3 questions; for a certificate, the title, the line above the name, a message, who signs it and whether to ask guests for an award.
4. Set the event name, font and date in Step 2 as usual. The event name is printed on the card and certificate.
5. Go on to Share and Session as normal and start the session.

TIP

Your choice is saved with the setup. The next time the booth opens it is still a card booth or a certificate booth. Tap **Photo booth** to go back.

3. Trading card booth

Step 1 chooses how the card looks. Step 2 chooses what guests are asked.

Built-in card styles

Category	Styles	Good for
Classic	Fire, Water, Grass, Electric, Shadow, Gold	Anything
Sports	Stadium, Court, Pitch	Fan days, school sports
Gaming	Neon, Pixel, Arcade	Conventions, esports, kids parties
Celebration	Confetti, Party gold, Balloons	Birthdays, awards, milestones
Festival	Sunset, Rave	Concerts, fiestas
Beauty	Blush, Pearl	Launches, pop-ups
Causes	Hope, Ribbon	Fundraisers, galas
Workplace	Corporate, Mint	Team building, company events

Random stats and rarity

Leave **Random stats & rarity** on and each card gets HP, ATK, DEF and SPD, and a rarity: Common, Rare, Epic or Legendary. Epic and Legendary cards get a rainbow holo shine and sparkles. The guest sees their rarity only after the photo, so it stays a surprise. The same name in the same session always gives the same card. Turn the option off for a clean card that shows the event name instead.

The back of the card

Tick **Give every card a back**. A built-in back shows the guest's name, the rarity, and the answers to your questions. Use **Preview the back** to look at it. On the booth, a guest can flip the card on the result screen, and tap the live preview on the form.

Questions for the back

In Step 2, type up to three questions, for example *Favourite team*, *Special move*, *My story in one line*. Each one you type is asked after the name and printed on the back. Leave a box empty to skip it. The questions only show on the back, so turn the back on.

> **TIP**
> Guests answer on the booth screen, so keep the questions short. Each answer is limited to 60 characters.

4. Certificate booth

Good for graduations, training days, school events and fun awards.

Built-in certificate styles

Category	Styles
Classic	Classic gold, Royal blue, Forest green, Black & gold, Rose, Teal, Burgundy
Celebration	Confetti, Sparkle

Wording (Step 2)

Setting	Example	Where it appears
Certificate title	Certificate of Achievement	Top, large
Line above the name	is proudly presented to	Small, above the name
Message (optional)	for being a wonderful part of our celebration	Under the name, up to 2 lines
Signed by / role	Ms. Reyes / Principal	Signature line, bottom
Ask each guest for an award	Best Dancer	Under the name; the guest types it
Date	Today's date, or the date you pick	Bottom right

> **TIP**
> For a school event where the names are known, set the award wording yourself and untick **Ask each guest for an award**. The guest only types their name, which is faster in a queue.

Paper

The certificate is made landscape at A4 shape. Allow **A4** or **Letter** for this renter in Admin (Print settings) and the booth turns it to fit. It also prints on 4R, with a small white border.

5. Your own templates

Upload designs made in Canva (or any editor) and use them instead of the built-in styles. Group them, and let guests choose.

Prepare the PNG

	Trading card	Certificate
Shape	Portrait, 2.5 x 3.5 (for example 750 x 1050 or 1500 x 2100 px)	Landscape A4 (for example 3508 x 2480 px)
Photo window	Leave **one** window white or see-through	Leave **one** window white or see-through
Text	Leave room for the name and title. Do not type the guest's name in the design.	Leave room for name, award and date.
Back (cards)	A second PNG, same shape, no photo window	Not used

> **GOOD TO KNOW**
> The booth finds the white or see-through window by itself. If a design has several windows it uses the biggest one. If it finds none, it places a box that you can drag over the photo area.

Upload and group

1. In Step 1, type a **group name** (for example *Superheroes* or *Graduation 2026*).
2. Press **Upload templates** and choose one or more PNG files. They are added to that group. Change the group name before the next upload to start another group.
3. The new template opens in the editor. Each uploaded template shows as a tile: **Use** makes it the event's design, **Edit** opens the editor, the cross removes it.
4. To let guests pick, tick **Let guests choose their design**. They will see tabs for each group. You can include the built-in styles in the choice or leave them out.

Place the photo and the text

The editor shows coloured boxes on the preview. **Blue** is the photo window and **orange** boxes are text. Drag a box to move it, and drag the small square at its corner to resize it. You can also type exact numbers. Each text box can be switched on or off and has its own colour and alignment (left, centre or right).

Text box	What it shows
Name	The guest's name
Title / award	The title (card) or award (certificate)
Date	The event date, or today
Event name	The event name from Step 2

> **TIP**
> Text colour is set automatically to white on dark art and dark on light art when you upload. Change it per box if it is hard to read.

Back of a template card

1. Open the template with **Edit** and tap the **Back** tab.
2. Press **Upload the back design** and choose the second PNG.
3. Drag the orange boxes to where the name, title, three answers, date and event name should go. Answer 1, 2 and 3 are the questions in Step 2, in order.
4. Switch back to **Front** to check the front. Tiles with a back show **2-sided**.

> **GOOD TO KNOW**
> A template without a back prints front only. The built-in styles always have a back when **Give every card a back** is on.

6. Printing

What	How it prints
Card, one side	On any paper you allow. A 4R sheet shows the card with white borders. For exact 2.5 x 3.5 cards add a custom size (for example 63.5 x 88.9 mm) in Admin, Print settings.
Card with a back	Front and back side by side on **one sheet** with a dashed fold line, for paper 85 mm wide or more (4R and bigger). Fold in half and sleeve it. On card-size paper (for example Selphy card) only the front prints.
Certificate	Landscape, so it is turned automatically on A4 or Letter. On 4R it fits with a small border.

Untick **Print both sides on one sheet** in Step 1 if you only want the front on paper. The back is still on the booth screen.

> **WATCH OUT**
> Always print one test card or certificate on your real printer and paper before the event, so you can check the colours and where the fold line falls.

7. Sharing

- The QR gives the guest the finished **front** of the card, or the certificate. The back is on the booth screen and on the printed sheet.
- Files are named like *12_card.jpg* and *12_cert.jpg*. **Cards shine and tilt** on the guest's phone: tilt the phone, or move a finger. They also shimmer by themselves. This works on the web gallery and on the laptop app's Wi-Fi page.
- On an iPhone the first tap may ask permission to use motion; if the guest says no, moving a finger still works.
- The Android app's Wi-Fi page does not have the shine yet.

Tips for a smooth event

Do	Why
Set the date and event name in Step 2	They are printed on every card and certificate.
Keep titles and questions short	Long text is made smaller to fit, which is harder to read.
Group templates by theme or by class	Guests find a design quickly from the tabs.
Limit the choices to what you can print	Every design appears in the picker for guests.
Use a clean light background behind guests	The photo window crops to the card shape, so the guest should be centred.
Test one full guest turn before doors open	Pick, type, photo, flip, print.

Limits and good to know

- Up to **30 templates** in total (cards and certificates together). Each can have one photo window.
- Cards and certificates have separate template lists.
- Template pictures are kept with your setup for rental and lifetime codes, so they follow the code to other devices. **Trials** keep them on that device only and they can be lost if the browser is cleared.
- Certificates and cards take **one photo**. Retakes, vouchers, lock booth and the guest screen work as usual.
- The guest's name box takes up to 24 characters and the title up to 32.
- Rarity and stats are random per card and cannot be edited by the guest.

Troubleshooting

Problem	Try this
No Booth type switch in Setup	Card & certificate booths is not turned on for this code or trial. Ask us to give it, then wait about 5 minutes or reload.
The photo is in the wrong place on my template	Open the template with Edit and drag the blue box over the photo area, or type its numbers.
Text is hard to read	In the editor change that text box's colour. White works on dark art.
The back option does nothing for my template	The template has no back yet. Open Edit, tap Back and upload the back design.
My template tiles are empty after reopening	The pictures are still loading, or this is a trial (kept on the device only). Re-upload the template.
The card looks cut off on the printout	The printer is trimming the edges. Use a bigger paper size or a custom size for the card, and test again.

Need help? Message us with your code name and a screenshot of the Setup page.
